

SOFTWARE ENGINEERING GROUP PROJECT WORK ASSIGNMENT 2026

1. Each group should pick any topic of their choice for the project work. The topic should focus on developing a software system to solve a problem or improve the work of a particular industry or company.
2. Think of any 6 functional requirements or system requirements for your project. The 6 requirements would be the basis upon which the system would be modelled, designed and tested.
3. Design 4 different models to present the proposed system from different perspectives:
 - i. *Context Model (Context Diagram)*
 - ii. *Process Mode (Flow Chart Diagram)*
 - iii. *Interaction Model (Use-Case Diagram)*
 - iv. *Database Model (ER-Diagram)*
4. The models can be drawn using any software of your choice, for example, *draw.io*, *UMLet*, *EdrawMax*, *Microsoft Visio* or any suitable, easy-to-use software of your choice.
5. Select any software development platform of your choice and develop a simple prototype to demonstrate the functionalities of the designed system.
6. Propose which of the System Testing Methods you would use to test your system and justify your choice.
7. Propose any software development process model of your choice and justify your choice.
8. The work should be ready by **Friday, 31st July 2026**.
9. Prepare a 12-page slide for the presentation of your group work for assessment. The content of the slide should be:
 - i. Title Page with your topic and group members' names with Index Numbers
 - ii. The functional Requirements
 - iii. The software development process model used
 - iv. The software Design Models
 - v. Testing
 - vi. Any other relevant material needed to explain your work
 - vii. Conclusion
